Consumer Confidence

Report 2025 (2024 results)

West Point PWS ID# 1612040

Introduction

As a responsible public water system (PWS), Lakes Region Water Company's mission is to provide safe and reliable water to all customers.

Aging infrastructure presents challenges for maintaining safe quality drinking water and continuous improvements are necessary. In the past year, we have detected, located, and repaired 3 water leaks in your system. In the coming year we intend to continue our best efforts to maintain the least amount of interruptions as possible.

What is a Consumer Confidence Report?

The Consumer Confidence Report (CCR) details the quality of your drinking water, where it comes from, and how to get more information. This annual report documents all detected primary and secondary drinking water contaminants and their respective standards known as Maximum Contaminant Levels (MCLs).

NOW IT COMES WITH A LIST OF INGREDIENTS.

The sources of drinking water (both tap water and bottled water) include rivers, lakes, streams, ponds, reservoirs, springs, and wells. As water travels over the surface of the land or through the ground, it dissolves naturally-occurring minerals and, in some cases, radioactive material, and can

pick up substances resulting from the presence of animals or from human activity.

Contaminants that may be present in source water include:

- Microbial contaminants, such as viruses and bacteria, which may come from sewage treatment plants, septic systems, agricultural livestock operations, and wildlife.
- Inorganic contaminants, such as salts and metals, which can be naturally occurring or result from urban storm water runoff, industrial or domestic wastewater discharges, oil and gas production, mining or farming.
- **Pesticides and herbicides**, which may come from a variety of sources such as agriculture, urban stormwater runoff, and residential uses.
- Organic chemical contaminants, including per- and polyfluoroalkyl substances, synthetic and volatile organic chemicals, which are by-products of industrial processes and petroleum production, and can also come from gas stations, urban storm water runoff, and septic systems.
- Radioactive contaminants, which can be naturallyoccurring or be the result of oil and gas production and mining activities.

In order to ensure that tap water is safe to drink, EPA prescribe regulations which limit the amount of certain contaminants in water provided by public water systems. The US Food and Drug Administration (FDA) regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

What is the source of my drinking water?

Lakes Region Water Company (LRWC) owns & operates three active Bedrock Wells. Bedrock Well #1 is approximately 600 feet deep, yields 5 gallons per minute (GPM) and is located 190 feet north of the Pumphouse. Bedrock Well #2, yielding 5.5 GPM is approximately 600 feet deep and is located 245 feet north of the Pumphouse. Bedrock Well #3 is approximately 600 feet deep, yields 5 GPM and is located 2 feet Southwest of BRW #2.

Why are contaminants in my water?

Drinking water, including bottled water, may reasonably be expected to contain at least some small amounts of contaminants. The presence of contaminants does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791.

Do I need to take special precautions?

Some people may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from the Safe Drinking Water Hotline at 1-800-426-4791.

Source Water Assessment Summary

NHDES prepared drinking water source assessment reports for all public water systems between 2000 and 2003 in an effort to assess the vulnerability of each of the state's public water supply sources. Included in the report is a map of each source water protection area, a list of potential and known contamination sources, and a summary of available protection options. The results of the assessment, prepared on 8/8/2000 and 6/3/2005 are noted below.

West Point	CWS	Susceptibility Factor Ratings				
Source Name	Date	Low	Med	High		
Bedrock Well #1	8/8/00	9	2	1		
Bedrock Well #3	6/3/05	9	2	1		

Note: Due to the time when the assessments were completed, some of the ratings might be different if updated to reflect current information.

The complete Source Assessment Report is available for review at LRWC's office in Moultonborough, NH. For more information call Justin at 603-476-2348 or visit NHDES' website

at: <u>https://www.des.nh.gov/resource-</u>

ceter/publications?keys=swpassessments&purpose=Reports&subcategory=Drinking+water.

Lead Service Line Inventory

A service line inventory has been prepared and can be accessed by going to Lakesregionwater.com, clicking on "Water Quality" at the top of the home page, then click on "Water Service Line Inventory", Then look for your Water Systems name.

How can I get involved?

For more information about your drinking water, please call the owner, Thomas Mason at (603) 476-2348 or the primary operator, Justin Benes, at (603) 476-2348. Although Lakes Region does not hold public participation meetings, you are welcome to contact us with questions and concerns. For more info concerning public participation opportunities in your community, contact your Homeowner's Association President for dates & times of Association meetings.

Violations and Other information: There were no violations in West Point in 2024.

Definitions:

Action Level or AL: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow. Maximum Contaminant Level or MCL: The highest level of a contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology. Maximum Contaminant Level Goal or MCLG: The level of a contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety.

Abbreviations:

mg/L: milligrams per Liter NA: Not Applicable ND: Not Detectable at testing limits pCi/L: picoCurie per Liter ppb: parts per billion ppm: parts per million ug/L: micrograms per Liter

Drinking Water Contaminants:

Lead: Lead can cause serious health effects in people of all ages, especially pregnant people, infants (both formula-fed and breastfed), and young children. Lead in drinking water is primarily from materials and parts used in service lines and in home plumbing. LRWCO is responsible for providing high

quality drinking water and removing lead pipes but cannot control the variety of materials used in the plumbing in your home. Because lead levels may vary over time, lead exposure is possible even when your tap sampling results do not detect lead at one point in time. You can help protect yourself and your family by identifying and removing lead materials within your home plumbing and taking steps to reduce your family's risk. Using a filter, certified by an American National Standards Institute accredited certifier to reduce lead, is effective in reducing lead exposures. Follow the instructions provided with the filter to ensure the filter is used properly. Use only cold water for drinking, cooking, and making baby formula. Boiling water does not remove lead from water. Before using tap water for drinking, cooking, or making baby formula, flush your pipes for several minutes. You can do this by running your tap, taking a shower, doing laundry or a load of dishes. If you have a lead service line or galvanized requiring replacement service line, you may need to flush your pipes for a longer period. If you are concerned about lead in your water and wish to have your water tested, contact Lakes Region Water Co @ 603-476-2348. Information on lead in drinking water, testing methods, and steps you can take to minimize exposure is available at

https://www.epa.gov/safewater/lead.

Health Effects of Lead Exposure to lead in drinking water can cause serious health effects in all age groups. Infants and children can have decreases in IQ and attention span. Lead exposure can lead to new learning and behavior problems or exacerbate existing learning and behavior problems. The children of women who are exposed to lead before or during pregnancy can have increased risk of these adverse health effects. Adults can have increased risks of heart disease, high blood pressure, kidney or nervous system problems.

Abbreviations:

BDL: Below Detection Limit NA: Not Applicable ND: Not Detectable at testing limits NTU: Nephelometric Turbidity Unit pCi/L: picoCurie per Liter ppb: parts per billion OR ug/L: micrograms per Liter ppm: parts per million OR mg/L: milligrams per Liter ppq: parts per quadrillion RAA: Running Annual Average TTHM: Total Trihalomethanes UCMR: Unregulated Contaminant Monitoring Rule

						LEAD AND COPPER			
Contaminant (Units)	Action Level	90 th percentile	Date	# of sites above	Violation Yes/No	Likely Source of Contamination	Health Effects of Contaminant		
Copper (ppm)	1.3	0.22	01/01/2023	0	NO	Corrosion of household plumbing systems; erosion of natural deposits; leach- ing from wood preserva- tives	Copper is an essential nutrient, but some people who drink water containing copper in excess of the action level over a relatively short amount of time could experience gastrointestinal distress. Some people who drink water containing copper in excess of the action level over many years could suffer liver or kidney damage. People with Wilson's Disease should consult their personal doctor.		
Lead (ppb)	15	5	01/01/2023	0	NO	Corrosion of household plumbing systems, erosion of natural deposits	Exposure to lead in drinking water can cause serious health effects in all age groups. Infants and children can have decreases in IQ and attention span. Lead exposure can lead to new learning and behavior problems or exacerbate existing learning and behavior problems. The children of women who are exposed to lead before or during pregnancy can have increased risk of these adverse health effects. Adults can have increased risks of heart disease, high blood pressure, kidney or nervous system problems. Lead can enter your water from pipes that bring the water to your home and from your home internal plumbing. Always flush your tap by running cold water for one minute before using every morning and after you've been away from home for the day. Use only cold water for drinking and cooking. In addition, our <u>GetTheLeadOutNH</u> program ensures that all K-12 schools and child care facilities in the state test for lead at every outlet where children drink the water and remediate any fixture testing at 5 ppb lead or higher.		

				BUL	K W	ATER D	ELIVERIES			
Bulk Water Source	9	Dates	of Wate	er Deliv	ery		Gallons Deli	vered	Reason for Delivery	
Town of Londonderry			08/19/2024 & 8/20/2024 & 8/21/2024			24	18,000		Replenish Storage Facility	
				D	ETEC	CTED W	ATER QUALIT	Y RESULTS		
						Radio	active Contaminan	ts		
Contaminant (Units)	Level Detected*	Date	MCL	MCLG	Violation Likely Source of YES/NO Contamination		Health Effects of Contaminant			
Uranium (ug/L)	7.3	12/14/2022	30	0		Erosion of natural NO deposits		Some people who drink water containing uranium in excess of the MCL over many years may have an increased risk of getting cancer and kidney toxicity.		
Combined Radium 226 + 228 (pCi/L)	0.4	10/15/2019	5	0		Erosion of natural NO deposits		Some people who drink water containing radium 226 or 228 in excess of the MCL over many years may have an increased risk of getting cancer.		
						Inor	ganic Contaminant	S		
Contaminant (Units)	Level Detected*	Date	MCL	MCLG	Viola YES/N		Likely Source of Contamination Health Effects of Contaminant			
Arsenic (ppb)	.0011	10/28/2024	5	0	N	its; rund tron	sion of natural depos- runoff from orchards; off from glass and elec- ics production wastes	 (2.5 ppb through 5 ppb) While your drinking water meets EPA's standard for arsenic, it does contain low levels of arsenic. EPA's standard balances the current understanding of arsenic's possible health effects against the costs of removing arsenic from drinking water. EPA continue to research the health effects of low levels of arsenic, which is a mineral known to cause cancer in humans at high concentrations and is linked to other health effects such as skin damage and circulatory problems. (Above 5 ppb) Some people who drink water containing arsenic in excess of the MCL over many years could experience skin damage or problems with their circulatory system and may have an increased risk of getting cancer. 		
Barium (ppm)	0.035	10/28/2024	2	2	N	NO Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits		Some people who drink water containing barium in excess of the MCL over many years could experience an increase in their blood pressure.		

PER- AND POLYFLUOROALKYL SUBSTANCES (PFAS) CONTAMINANTS

Contaminant (Units)	Level De- tected*	Date	MCL	M CL G	Violation YES/NO	Likely Source of Con- tamination	Health Effects of Contaminant
Perfluorooctanoic acid (PFOA) (ppt)	1.94	10/20/2023	12	0	NO	Discharge from indus- trial processes, wastewater treatment, residuals from fire- fighting foam, run- off/leachate from land- fills and septic systems	Some people who drink water containing perfluorooctanoic acid (PFOA) in excess of the MCL over many years could experience problems with their liver, endocrine sys- tem, or immune system, may experience increased cholesterol levels, and may have an increased risk of getting certain types of cancer. It may also lower a women's chance of getting pregnant.

					SECONDARY CONTAMINANTS				
	Level De- tected	Date	Treatment technique (if any)	SMCL	50 % AGQS (Ambient ground- water quality standard)	AGQS (Ambient groundwater quality standard)	Specific contaminant criteria and reason for monitoring
